

BRS Labs Opens Preferred Funding Round to Advance Product Development *New investment made available after closing \$15 million in growth funding in 2012*

Houston, TX USA – May 8, 2013 – Behavioral Recognition Systems, Inc. (BRS Labs), creator of AISight®, the first artificial intelligence system for video surveillance that detects suspicious behavior, today announced a Preferred Funding Round. This new level of investment will directly support research and development for significant new capabilities and performance enhancements in the company's market-leading Behavioral Recognition™ solutions.

The Preferred Funding Round, available only to accredited investors, will finance the final stage of development for the company's product line. Behavioral recognition and analysis for video surveillance represents the most difficult and demanding application of its core technology, and is now in wide use for enhanced real-time situational awareness for safety and security, anti-crime and anti-terror applications.

The new line of products resulting from this investment is scheduled for release in early 2014 and will expand the application of the company's behavioral recognition technology to markets outside of video surveillance. Potential new applications of this technology include cyber-security, chemical-biological-nuclear threat-detection, airspace management, submersion systems, facilities management, and other areas requiring real-time behavior analysis across large numbers of disparate sensors.

“Our AISight behavioral recognition solution has proven itself as the only scalable and manageable video surveillance solution for real-time threat and safety awareness,” said Ray Davis, Chief Executive Officer of BRS Labs. “It routinely replaces obsolete video analytics applications at major rail transit agencies, city and municipalities, state and federal government campuses, critical infrastructure, electrical and nuclear sites, and other high-threat facilities around the world. Our deep commitment to ongoing research and development is the foundation of this success. By utilizing this funding round and not relying on profits from existing products, BRS Labs will accelerate the anti-threat and anti-terror protection that the world needs today.”

About BRS Labs

BRS Labs builds self-learning behavioral recognition software for enhanced video surveillance. These highly automated solutions dramatically improve situational awareness and incident response across complex physical environments. This patented artificial intelligence technology accurately identifies potential and active threats in real-time, deploys quickly, and is inexpensive to operate. Customers use BRS Labs to react sooner to unfolding safety, security and operational management situations, and to deploy staff more efficiently. That's why government agencies and major corporations rely on BRS Labs to protect people, assets, facilities and borders. BRS Labs is headquartered in Houston, with offices in Washington DC, London, Sao Paolo and Barcelona.

This press release may contain statements of a forward-looking nature relating to future events. These forward-looking statements are subject to the inherent uncertainties in predicting future results and conditions. These statements reflect BRS Lab's current beliefs, and a number of important factors could cause actual results to differ materially from those expressed in this press release. Please contact BRS Labs' investor relations department for a more detailed discussion of the risks and uncertainties associated with the company's business, including, but not limited to, the risks and uncertainties associated with capital investing and other significant factors that could affect the company's actual results. Except as otherwise required by Federal law, the company undertakes no obligation to update or revise these forward-looking statements to reflect new events or uncertainties.
